Abstract

The package `productbox` provides a style file for typesetting a three-dimensional product box. This product box can be rendered as it is standing on a surface and some light is shed onto it. Alternatively it can be typeset as a wireframe to be cut out and glued together. This will lead to a physical product box.

*This file documents `productbox.dtx` version 1.2 (from revision 1.2) as of 2026-05-17.
