1 Introduction

The package `pst-pdf` simplifies the use of graphics from PSTricks and other PostScript code in PDF documents. As in building a bibliography with `BIBTEX` additional external programmes are being invoked. In this case they are used to create a PDF file (`\PDFcontainer`) that will contain all this graphics material. In the final document this contents will be inserted instead of the original PostScript code.

nopstricks The package `pstricks` does not get loaded. Once it is detected that `pstricks` was loaded however in some other way, the `pspicture` environment is treated as if the option “`pstricks`” was given.

draft From the `\PDFcontainer` file included graphics is displayed as frame in `pdfLATEX` mode.

final From the `\PDFcontainer` file included graphics is correctly displayed in `pdfLATEX` mode (default).

tightpage The graphics’ dimensions in the `\PDFcontainer` file match exactly those of the corresponding `TEX` boxes (default).

notightpage The dimensions of the `TEX` box corresponding to its graphics is not always correct, since a PostScript statement can draw outside its box. The option “`notightpage`” makes the graphics in the `\PDFcontainer` file to be at
