

1 Introduction

pst-poker itself loads the following packages:

```
\RequirePackage{pstricks,pst-blur,multido}
\RequirePackage{graphicx}
\RequirePackage[tiling]{pst-fill}
```

If you want to pass some optional arguments to one or more of these packages you have to use the macro `\PassOptionsToPackage` *before* loading pst-poker. The best way is before the document class. For example

```
\PassOptionsToPackage{graphicx}{xetex}
\documentclass{article}
\usepackage{pst-poker}
[...]
```

2 Inline Poker symbols

There are several possible styles for inline cards. The default way is as small cards, i.e.     . They can also be displayed as simple symbols A♣ K♥ Q♦ J♠ 10♣ or as boxed symbols     .

A card back  is available, too.

It is also possible to variate the used colorset. In addition to the standard red/black colors, a four color set  as often used in online poker can be chosen. When colors are not desired, i.e. for printing purposes, the possible alternatives are a grayscale version A♣ K♥ Q♦ J♠ 10♣ or complete black/white      with outlined red symbols.

3 Poker cards

The big cards offer a lot of options for design. The default design looks like this.

The most basic variation is the size set by unit.
