

# Kp-Fonts

The JOHANNES KEPLER project

Release 3.36<sup>1</sup>

CHRISTOPHE CAIGNAERT (INACTIVE)  
c.caignaert@free.fr

*Save up your toner and the environment, use the "light" option,  
it's 20% toner less!*

## 1 Kp-Fonts

### 1.1 What is Kp-Fonts?

Kp-Fonts provides a full set of fonts for LaTeX typesetting, including roman, sans-serif et fixed-width fonts, as well as a set of mathematics symbol fonts with, regular and bold, all the common symbols and all those of the AMS and more...

The typical feature of these fonts is to have a basic and dynamic shape. For instance, look at the roman upright "a" glyphs:

| Kp-Fonts                                                                            | Kp-light                                                                            | CM                                                                                  | Palatino                                                                            | Utopia                                                                                | Times                                                                                 |
|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
|  |  |  |  |  |  |

The project is to provide a large set of options to customize your math or text typesetting.

This LaTeX package is distributed with a GPL licence.

Kp-Fonts doesn't require any other font package and is fully compatible with `amsmath` and `textcomp` with the `full` option. Kp-fonts loads these two packages except if you use relative options.

*You haven't to load `amsmath` and `textcomp` packages*

*You can use the options of `amsmath` a option of `kpfonts`, except `cmex10`.*

To use it, you just have to add `\usepackage{kpfonts}` in your document preamble, if necessary with the options described below.

Besides, the aim is to get a good compatibility with different sets of math font packages.
