Version v1.3c – 2025/02/26

CTAN: <https://www.ctan.org/pkg/adjustbox>

VC: <https://github.com/MartinScharrer/adjustbox/>

Abstract

This package allows to adjust general $\LaTeX$ material in several ways using a key=value interface. It got inspired by the interface of `\includegraphics` from the `graphicx` package. This package also loads the `trimclip` package which code was once included in this package.
