

Here we have three ^{a,b,c} and the commas are inserted automatically between the text markers. But, if a line break is between the two `\sidenote` commands, then that requires a % sign before the line break.

Side notes can be placed without references by using the `\sidenote*` option

The command `\sidealert` provides a temporary margin notes rendered in red or by the users defined `!colour!`. The alert mark has zero width so it does not alter the main text layout and is also rendered in colour. The package option `alerton` needs to be specified in the document preamble, if omitted the alerts are not printed.

```
a \sidenote<-15pt> Test up
b \sidenote!Blue! Test colour
c \sidenote|-12mm| but cannot float past d
above
A sidenotetext without a mark. Also
testing if the command sidepar works.
And here we have a new paragraph.
And here we have a new paragraph. And
here we have a new paragraph
```

- 1 - This paragraph needs to be expanded

```
