

Here we have three ^{a,b,c} and the commas are inserted automatically between the text markers. But, if a line break is between the two `\sidenote` commands, then that requires a % sign before the line break.

Side notes can be placed without references by using the `\sidenote*` option

The command `\sidealert` provides a temporary margin notes rendered in red or by the users defined `!colour!`. The alert mark¹ has zero width so it does not alter the main text layout and is also rendered in colour. The package option `alerton` needs to be specified in the document preamble, if omitted the alerts are not printed.

a `\sidenote<-15pt>` *Test up*

b `\sidenote!Blue!` *Test colour*

c `\sidenote|-12mm|` *but cannot float past*^d
above

A sidenotetext without a mark. Also testing if the command sidepar works.

And here we have a new paragraph.

And here we have a new paragraph. And here we have a new paragraph

- 1 - *This paragraph needs to be expanded*
