

The comicsans package*

1 Introduction

The `comicsans` package makes Microsoft's Comic Sans font available to $\text{\LaTeX} 2_{\epsilon}$. `comicsans` supports all of the following:

- Roman text, **boldface text**, `SMALL-CAPS TEXT`, and—with a little extra effort—*italic text*
- Кириллица (римский шрифт, **жирный шрифт**, *каллиграфический шрифт*)
- Mathematics using Comic Sans wherever possible:

$$y'(x) \approx 3 \times 10^{\log_3 2^{\hat{e}}} + \sum_{k=x}^{\infty} \frac{\xi_k}{p_{k-1}}$$

Comic Sans is a TrueType (TTF) font. As such, it works particularly well with `pdf $\text{\LaTeX}$` , which natively supports TrueType fonts. Some $\text{\TeX}$ distributions also support dynamic conversion of TTF to PK (a bitmapped font format long used by $\text{\TeX}$) so $\text{\TeX}$ backends other than `pdf $\text{\TeX}$` can (indirectly) utilize TrueType fonts, as well.

2 Installation

The following is a brief summary of the `comicsans` installation procedure:

1. Acquire and install the Comic Sans TrueType (`.ttf`) files.
2. [Optional] Generate the italic and/or Cyrillic variants of Comic Sans
3. Install the `comicsans` font files and refresh the $\text{\TeX}$ filename database.

* This document corresponds to `comicsans v1.0g`, dated 2013/12/19.
